

**We advance machine learning
for good**

OUR SERVICES

**We support you in all areas of training
data, annotation and web-based services
so that you can focus on your business.**

We can help streamline your business by taking a large amount of unstructured data and making it searchable, understandable, reliable, and relevant. We work with large swaths of data, from social media feedback, product listings, taxonomies, to attribute mining and moderation for our clients.

Boost your online presence with accurate product data, optimized content and customised customer communications. We work across all ecommerce verticals to achieve higher ranking, greater visibility, and increased customer conversions by handling all online and offline cataloguing requirements.

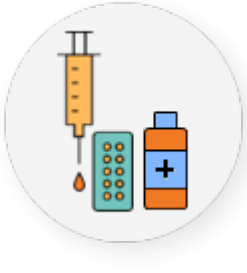

Our team helps build the training data that powers the world's most advanced image and video algorithms. From assigning metadata to images to identifying different types of input or tracking objects in videos our teams annotate data for cutting edge technology companies, such as autonomous vehicles, drone

and satellite imagery, medical diagnosis technology, facial recognition, and AR/VR.

Our team enables human to machine communication by extracting

meaning from natural language data to build high-quality data sets. We provide input for your algorithms to extract meanings associated with sentences, collect essential data, and read, decipher, and makes sense of human language.
